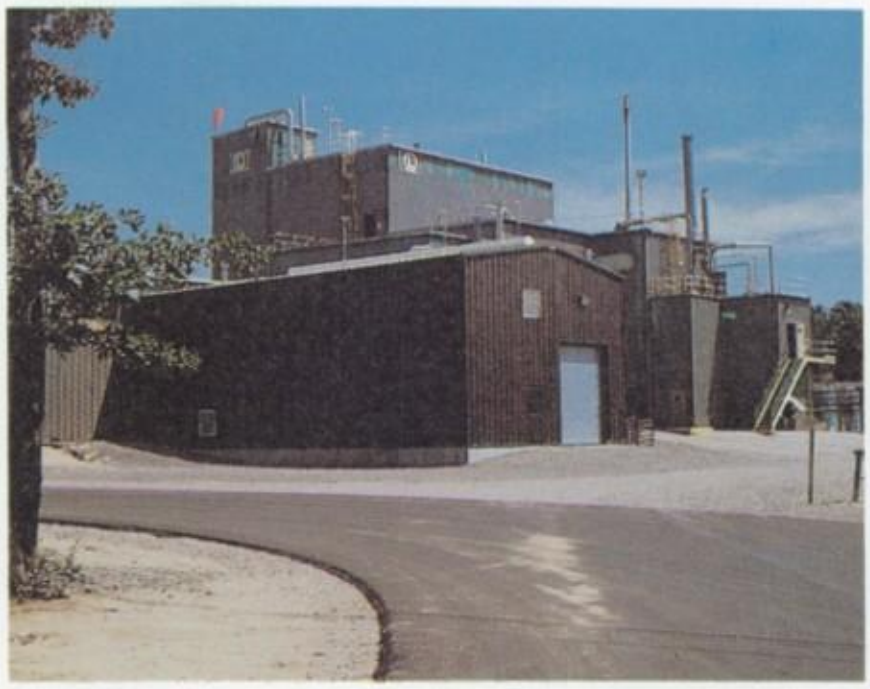
Bofors Nobel Inc. is located on a 450 acre site east of Muskegon, Michigan. The current facilities consist of eight separate production and plant-service areas. Through a vigorous program of maintenance as well as a commitment to expansion and modernization, Bofors has been able to assure the chemical industry of its position as a world-class producer of fine chemicals.

In late 1982, a new pack-out tower was brought on-stream in production of DCB–a yellow pigment intermediate. This facility enables Bofors to meet the anticipated market needs into the 1990's while at the same time providing the protection needed for the employees as well as the environment.

Another example of Bofors commitment to the future is the formation of the Environmental Systems Corporation to treat waste products generated as a result of production facilities. The innovative technologies employed by ESC will enable Bofors to provide a unique service to the specialty chemical industry. ESC will treat and control all wastes on site in a safe manner which will provide the flexibility to manufacture complex chemical products.



In the spring of 1983, a new Bofors' corporate office building was dedicated. The building was designed to blend well with the attractive natural surroundings. A new modern Research and Development building is attached to the office building and embodies the same respect for the setting.

Bofors Nobel has a strong commitment to continue its dramatic growth and success and to pursue a high standard of excellence.
